

Population Genetics and Evolution

Course outline

Fall 2022

Course No#: DIC 8042 (NTNU); No.#5493(THU)

Credits: Three (3 hr per week)

Time: 13:00-16:00, Thursdays

Place: 1. F203, 2F, College of Science Building, NTNU Gongguan Campus (week 1)

2. B204 (2F), Interdisciplinary Building, Academia Sinica, Biodiversity

Research Center (BRC Building), Academia Sinica (weeks 2~16)

Organizers: Prof. Shou-Hsien Li (7734-6311)

Lecturers: Dr. John Wang

Dr. Ryuji Machida

Tel: 2787-1582 (A302, BRC)

Tel: 2787-1585 (200,Green House)

johnwang@gate.sinica.edu.tw

ryujimachida@gate.sinica.edu.tw

Dr. Ko-Hsuan Chen

Tel: 2787-2260 (B301, BRC)

kohsuanchen@gate.sinica.edu.tw

This is a graduate level course intended for PhD students to learn the fundamentals of population genetics and evolution. The course will be primarily discussion and based on the chapter and paper reading assignments; on most days, there will be no lectures. Students are expected to complete all reading assignments ahead of each class and be prepared for critical discussion. [If COVID-19 pandemic is getting worse, we will make accommodations for remote online classroom discussions.](#) The quality of class participation is an important part of a student's grade, and the practical reality is that a better internet connection facilitates participation. Thus, concomitantly, remote students must make full effort to obtain a strong internet connection for better discussions.

At the end of the course, we hope that this course will help you develop as an independent scientist. Specifically, students will:

Learn how to critically read and evaluate scientific publications

Identify interesting research questions and propose experimental tests in the form of a grant

Grading/Evaluation of students:

- 30%, weekly written homework assignments
- 30%, quality of class participation

- 15%, midterm: written critique and evaluation of a scientific manuscript
- 25%, final: grant proposal and reading committee evaluation

We will use the following textbook:

Weeks 1-11:

Population Genetics 1st Edition by Matthew B. Hamilton (Wiley-Blackwell, 2011)

Please note, we are going back to the 1st edition!

Weeks 12-15:

Evolution 4th Edition by Douglas J. Futuyma (Sinauer Associates, Inc, 2017)

DATE	WEEK	TENTATIVE TOPIC
9/8	1	Class organization/Introduction/Thinking like a population geneticist Classroom: F203, 2F, College of Science Building, NTNU Gongguan Campus
9/15	2	Genotype frequencies
9/22	3	Genetic drift and effective population size
9/29	4	Genetic drift and effective population size
10/6	5	Population structure and gene flow 1
10/13	6	Population structure and gene flow 2
10/20	7	Mutation
10/27	8	Mol Evolution 1
11/3	9	Mol Evolution 2 (midterm due)
11/10	10	Natural Selection 1
11/17	11	Natural Selection 2
11/24	12	Clades/Trees and Speciation
12/1	13	Sexual selection
12/8	14	Coevolution
12/15	15	Evo-Devo Final exam [grant proposal] due
12/22	16	Grant "reading committee": Should grant be funded?
		Revision of grant due
